COMBUSTION

State-of-the-art heating body for more efficient and cleaner combustion (minimum CO and dust content) thanks to essential factors:

- its airtightness for perfect combustion air control (primary air, secondary air and window air fully channelled and controllable)
- Its 2 vermiculite-coated steel and stainless steel baffles (removable without tools)

USE

- Individual air control for combustion control
- Easy access ashtray
- Possibility of directing convection air to the air distribution or to the room
- "clean glass" system

INSTALLATION

- The choice and placement of fixings depends on the nature of the wall and is the responsibility of the installer
- The wall must support the weight of the appliance (with the connecting pipes and the wooden load)
